

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-1038
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create problem statements from the customer's point of view. For the Auto Ticket Classification project, the statements focus on common helpdesk difficulties such as manual ticket categorization, delayed acknowledgement, inconsistent category selection, and difficulty handling high ticket volumes.

Example:

I am IT helpdesk requester	I'm trying to Submit a support ticket	But The ticket needs manual categorization	Because Helpdesk staff must read and classify each request	Which makes me feel Uncertain about how quickly my issue will be handled
-----------------------------------	--	---	---	---

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or teacher submitting an IT support ticket	Get the issue classified and routed correctly	I must depend on manual ticket categorization	Support staff need to read and classify repetitive requests	Concerned about delays and inconsistent handling
PS-2	An IT helpdesk requester	Know that my ticket was successfully submitted	There may be a delay before I receive acknowledgement	Confirmation is handled manually without automation	Uncertain whether my request was received
PS-3	An IT support technician	Work on the correct type of incident quickly	Tickets may have inconsistent categories or subcategories	Different users or agents can classify similar issues differently	Frustrated by extra sorting and rework
PS-4	An IT helpdesk team during peak periods	Handle a large number of tickets efficiently	Manual triage becomes a bottleneck	Ticket volume can increase significantly during busy periods	Overloaded and delayed in responding
