

Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	XXXXX
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the structure, readability, and reusability of the Auto Ticket Classification workflow in ServiceNow Flow Designer. Clear flow names, meaningful action labels, organized conditions, documented decision branches, and reusable subflows help keep the ticket-classification process maintainable and easier to extend.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Naming	Use clear names for flows, triggers, actions, variables, and conditions.	Yes	Use a standard naming convention.
2	Proper Flow Structure	Organize the trigger, classification conditions, field updates, and notifications in a logical sequence.	Yes	Keep the flow easy to follow.
3	Meaningful Variable Names	Use descriptive names for ticket description, category, subcategory, and assignment values.	Yes	Avoid unclear abbreviations.
4	Action / Step Names	Name each Flow Designer action according to its purpose.	Yes	Examples: Check Keywords, Set Category.
5	Comments / Documentation	Document classification rules and explain important decision branches.	Partial	Add notes for keyword rules.
6	Modular Design	Separate reusable classification logic into subflows where appropriate.	Partial	Subflows can be added as needed.
7	No Redundant Logic	Avoid repeating the same keyword checks and field updates across multiple branches.	Yes	Use shared conditions when practical.
8	Error Handling	Handle missing descriptions, unmatched keywords, and failed notification actions.	Partial	Use a default category or manual review path.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Ticket Classification Flow	ServiceNow Flow Designer	Runs when a new ticket is created and classifies it using description keywords.	High

Reusable Components / Modules (Continued)

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
2	Keyword Condition Rules	Flow Designer Conditions	Checks ticket descriptions for network, hardware, access, and performance issues.	Medium
3	Category / Subcategory Update	Update Record action	Sets the appropriate category and subcategory fields on the ticket record.	High
4	Requester Confirmation	Email Notification / Flow Action	Sends a confirmation after the ticket is created or processed.	Medium
5	Default / Manual Review Path	Flow Designer If / Else	Routes tickets with unknown or unclear keywords for manual classification.	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	Flow steps are organized in a clear order.
Readability	4	Descriptive labels make the workflow easier to understand.
Reusability	3	Classification rules and notification actions may be reused or moved into subflows.
Documentation / Comments	3	Add detailed notes for keyword conditions and exceptions.
Overall Score	3.5 / 5	Indicative assessment; update after reviewing the final implementation.

Note: This is a project-specific planning assessment based on the described Flow Designer solution. Update the checklist, ratings, and remarks to reflect the actual implemented workflow before submission.
