

No. of Functional Features Included in the Solution

Date	29 September 2026
Team ID	SWTID-2026-1038
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	5 Marks

Functional Features Overview:

This document lists the functional features proposed for the Auto Ticket Classification solution using ServiceNow Flow Designer. The flow can evaluate incoming ticket details, apply configured classification rules, and route tickets for appropriate handling. Status values should be updated after verifying the flow in the ServiceNow instance.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks Contribution
1	Ticket Trigger	Starts the flow when a new ticket is created or when a configured ticket event occurs.	Flow Trigger	To verify	Core
2	Ticket Field Evaluation	Reads configured fields such as short description, category, service, and priority.	Flow Data / Conditions	To verify	Core
3	Automatic Classification	Uses condition branches and rules to select the appropriate ticket category or type.	If / Else Conditions	To verify	Core
4	Priority Handling	Applies configured priority rules when relevant keywords or ticket values are detected.	Decision Rules	To verify	Core
5	Assignment Group Routing	Routes classified tickets to the configured support or assignment group.	Update / Assignment Action	To verify	Core
6	Ticket Record Update	Updates the selected classification fields on the ticket record.	Record Update Action	To verify	Core
7	Fallback for Unmatched Tickets	Provides a default category or leaves the ticket for manual review when no rule matches.	Default Branch / Manual Review	To verify	Support
8	Testing and Flow Monitoring	Tests sample tickets and checks flow execution results for incorrect routing or errors.	Testing / Execution Details	To verify	Support

Feature Summary:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	To be confirmed after testing
Core / Must-Have Features	6
Additional / Nice-to-Have Features	2
Features Tested & Verified	To be confirmed after testing

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	0 or as configured	ServiceNow ticket form fields used by the flow; no separate UI assumed.
2	Backend / Logic	4	Ticket field evaluation, classification rules, priority handling, fallback logic.
3	Database / Storage	1	Update the ticket record with classification values.
4	API / Integration	0 or as configured	No external API assumed; add details if your flow integrates with other services.
5	Security / Authentication	Platform-managed	ServiceNow roles and permissions govern who can configure or run the flow.

Notes / Verification:

The feature list is a project-template draft based on the project title and the supplied example layout. It does not confirm that these features are already implemented. Update each status and the implemented/tested counts after checking the actual Flow Designer configuration.
