

Demonstration of Proposed Features

Date	29 September 2026
Team ID	SWTID-2026-1038
Project Name	Auto Ticket Classification & Routing System using Flow Designer
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Environment & Update Set Container Setup	Configuration of isolated Local Update Set tracking workspace capturing configurations into an exportable XML artifact structure.	Implemented	Yes	Successfully packaged customizations into the 'Project Update Set' workspace.
2	Custom Application Schema Architecture	Creation of a structured relational table (u_incident_workflow) configured natively inside the platform source engine.	Implemented	Yes	Database structure active; auto-number sequence engine functional using prefix INC.
3	Dynamic Dependent Choice Verification Matrix	Implementation of parent-child dictionary linkages enforcing field dependency constraints on the client intake form layers.	Implemented	Yes	Data schema dynamic validations passed; dropdown parameters auto-filter securely.
4	Event-Driven Visual Workflow Automation Engine	Building a backend server-side visual routing architecture using standard ServiceNow platform Workflow Studio capabilities.	Implemented	Yes	Trigger mechanisms activate instantly on blank record database insertions.
5	Real-Time Low-Code Rule Classification Engine	Event handler parsing incoming summaries using a robust conditional multi-branch decision criteria matrix in under 1 second.	Implemented	Yes	Seamless zero-touch automated field mapping confirmed across four standard operational domains.

6	Automated SMTP Messaging Pipeline Routing	Native integration with ServiceNow transactional engines utilizing contextual references to dispatch instant notifications.	Implemented	Yes	Outbound communications successfully populated via data pill inputs and verified in target context logs.
