

Project Demo Planning

Date	29 September 2026
Team ID	SWTID-2026-1038
Project Name	Auto Ticket Classification & Routing System using Flow Designer
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Update Set Infrastructure	Demonstrating the completed XML architecture payload container ('Project Update Set') ready for cross-instance package export.	3 mins	R Roshini
2	Staging Relational DB Setup	Showcasing 'u_incident_workflow' database schema configuration, attributes data columns, and custom INC incremental sequence script logic.	4 mins	R Nishandhini
3	Dependent Schema Binding	Live validation walkthrough demonstrating dynamic client-side dropdown filtering mappings inside Category & Subcategory components.	4 mins	A Amirthasri
4	Flow Designer Trigger Engine	Showing the server-side visual rule trigger workflow executing upon record creation variables where category is null.	5 mins	S Paraneeshwari
5	Keyword Triage Processing	Executing 4 live simulation test cases under 1 second processing window to map Network, Hardware, Access, and Performance strings automatically.	5 mins	A Sowndarya & Team
6	Transactional Logs Registry	Opening the internal SMTP transaction table ('sys_email') tracking window to verify outbound recipient email address data pill assignment grids.	4 mins	R Roshini

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Highlight manual helpdesk routing time blocks (5-15 mins) and operational bottlenecks existing in school IT support queues.
2	Solution Overview	Map architectural vision: LCNC zero-touch automation logic execution engine using Now Platform native capabilities.
3	Live Feature Demonstration	Perform real-time ticket creation inputs tracking to evaluate instantaneous rule matching, schema field updates, and execution log states.
4	Q&A; Session	Discuss cross-instance XML update set transport portability matrix limits and future AI/ML natural language expansion frameworks.
